

- Please keep this notification in a safe and secure location.
- For foreign residents, the Basic Resident Registration Network System commenced operation on July 8, 2013. In accordance with this, a Resident Record Code is entered in the Resident Record of foreign residents.
- The Basic Resident Registration Network System is a system that enables nationwide identity verification by putting the Basic Resident Registration (official proof of residence) on a network.
- The Resident Record Code is a random 11 digit number that is essential in performing nationwide identity verification through the Basic Resident Registration Network System.
- With regard to some administrative procedures, it is possible to omit attachment of a copy of the Resident Record by specifying the Resident Record Code on the application. For detailed procedures, please inquire at the appropriate section.
- The Basic Resident Registration Network System takes various measures to maintain security such as restricting possession and usage of information, preventing improper internal use, preventing outside intrusions, etc.
- The Resident Record Code can be changed at residents' request.
- Under the Basic Resident Registration Act, non-government organizations are prohibited from requesting disclosure of Resident Record Codes.
- Under the Basic Resident Registration Act, non-government use of the Resident Record Code is prohibited.
